RBD-3M 20/6 • 6' x 0.25"
3 Roll Plate Bender

These plate rolls feature heavy, welded construction, with all rolls mated to high-quality, heavy-duty bearings, which ensures minimum friction and even rotation of the bending rollers and are suitable for forming aluminum or stainless steel. Manually adjusted, this 3-roll plate roller is designed for light to medium jobs. It is used in air conditioning channels, advertising panels, and sheet metal covers. Both the top and bottom rolls are driven by an electric motor and chain, and the position of the top roll is fixed while the bottom and side rolls are movable. Our bending machines uses top brand components like Siemens, Rexroth, Bosch, Parker, Atos, Telemechanique, SKF, NSK, and FAG to guarantee high-quality lifelong performance.

Standard Configuration:

- Easy operation with mobile control panel
- Drop end for easy removal of bent parts
- Induction hardened rolls made of SAE 1050 steel
- Cable safety system
- Automatic lubrication
- Fine bending with motor brake
- Operation manual

From $548*/month!

Specifications

Roll length	2050 mm (80")
Bending capacity	6 mm (0.25")
Pre bending capacity	5 mm (0.2")
Roll diameter	Ø170 mm (6.7")
Motor power	4 kW (5 Hp)
Dimensions	3850x720x1050 mm (152"x29"x42")
Weight	2100 kg (4,600 lbs)
